**Abstract:** While transgenic technology has been bringing great benefits to humankind, it may meanwhile cause potential risks to human health and ecological environment. Therefore it needs regulation for governing a right direction and checking a balance between the multiple aspects, including, such as, food, medicine, economy, public health and environmental protection. Since the early 1980s, China has promulgated multiple regulations, rules and policy documents to regulate R&D and application of the transgenic technology in fields of agriculture and medicine. This presentation introduces, analyzes and comments these regulations of transgenic technology in China.
